

PRESS RELEASE

Navitas Renewables secures major wind turbine installation contract in Ukraine.

Navitas Renewables to install 64 wind turbines in Ukraine

Navitas Renewables, a global leader in renewable energy solutions, is proud to announce its latest milestone in securing a significant contract from DTEK Renewables to install 64 Vestas wind turbines on the Tyligulska wind farm, the Mykolaiv region, Ukraine. This landmark project is a vital step in rebuilding Ukraine's energy infrastructure.

Energy Supply for 900,000 Households

The project will have the capacity to generate over 350MW of clean energy, sufficient to power app 900.000 homes. By focusing on sustainable and resilient energy solutions, Navitas Renewables aims to support Ukraine's recovery efforts and contribute to a more secure and independent energy future.

"This is more than just an energy project; it is a symbol of resilience and hope for Ukraine," said Henrik Monefeldt, Partner in Navitas Renewables. *"We are honored to play a role in restoring critical infrastructure and providing clean, reliable energy to communities impacted by the ongoing conflict."*

Ukraine's energy independence is being rebuilt

The installation process is set to commence and is expected to be completed by end of 2026. Once operational, the wind farm will not only advance Ukraine's renewable energy goals but also serve as a cornerstone in rebuilding the nation's energy independence.

Strong expertise in energy installations internationally

Navitas Renewables' expertise in renewable energy projects spans international, with successful installations across several geographies, hereunder Ukraine. This new venture highlights the company's leadership in delivering reliable, scalable, and sustainable energy installation solutions, international.
